

WE HAVE THE **POWER** OF DAL

An appointment to the **ROYAL SOCIETY OF CANADA** is one of the highest honours a Canadian scholar can achieve, and recognizes remarkable contributions in the arts, humanities and science.

Dr. Mary Anne White's extensive research into thermal properties of materials has led to a more efficient world, one where waste heat can be transformed into energy that we can use. A global authority on infectious diseases, **Dr. Thomas Marrie's** lifetime of study means a healthier planet for us all. Every day, his work means people battling diseases like pneumonia can get better, faster.

The world-renowned work of these two new Royal Society Fellows improves people's lives in a very real way. Dal is proud to celebrate their accomplishments with them.
